Education

BS (Information Technology)

Bahria University Islamabad [2019-2023]

ICS (Intermediate in Computer Science)

HAPS&C Islamabad [2017-2019]

Expertise

- Penetration testing (Web Apps, Networks)
- SAST (Web, Mobile, Desktop Apps)
- Web Development (Flask/Django)
- Python Development
- Azure & AWS Deployment
- C/C++ Programming
- Security Tools (Metasploit, Burp Suite, Wireshark, Nmap, Splunk, etc)
- Cloud Security
- SAST & DAST
- Red Teaming
- PHP
- Bash Scripting
- Git
- Operating Systems (Windows, Linux, Unix)

Muhammad Nauman Azeem

Vulnerability assessment and penetration tester

Objective:

Highly skilled and certified Cybersecurity Engineer with extensive expertise in penetration testing, web application and network security, Python development, and proactive threat mitigation. I seek to contribute my skills and experience to enhance the security posture of forward-thinking organizations.

Professional Summary:

- Over 04 years of experience in cybersecurity, specializing in penetration testing, vulnerability assessment, and security solutions.
- Proficient in Python programming, with a track record of developing custom tools and scripts to enhance security measures and automate tasks.
- In-depth knowledge of web application and network penetration testing techniques.
- Proven ability to identify security weaknesses, recommend improvements, and implement solutions to safeguard sensitive data and systems.
- Strong understanding of the latest security threats, vulnerabilities, and attack vectors.
- Proven track record of identifying and remediating security weaknesses, and enhancing overall security.
- Excellent communication and teamwork skills, facilitating effective collaboration with cross-functional teams and stakeholders.

Professional Experience:

Zeroxinn Pvt Ltd, Islamabad

May 2020-present

Cybersecurity Engineer/Penetration Tester

- Conducted penetration tests and vulnerability assessments on a wide range of systems and applications, identifying weaknesses and providing recommendations for remediation.
- Performed regular vulnerability assessments and security audits on systems and applications.
- Developed custom Python scripts and tools to automate security tasks, analyze logs, and enhance security measures.
- Led Red Team engagements, simulating real-world cyberattacks to assess an organization's security defenses.
- Responded to security incidents, performed forensic analysis, and recommended measures to prevent future occurrences.
- Analyzing security logs and event data to identify and respond to security incidents.
- Collaborated with clients to deliver actionable security recommendations and solutions.
- Assisting in incident response and guided mitigating security breaches.
- Conducting security awareness training for employees to promote best practices.
- Conducted research and kept up-to-date with emerging cybersecurity threats and trends to ensure proactive protection.

VaporVM IT Services, Lahore

Oct 2021 - Jan 2022

Internship

During my cybersecurity and automation internship at VAporVM, my responsibilities included conducting security configuration assessments, carrying out penetration testing for mobile and web applications, assessing infrastructure security, and optimizing processes using Python scripting. I pinpointed vulnerabilities, collaborated with cross-functional teams to address them, and created automation solutions. This internship significantly expanded my knowledge of cybersecurity methodologies, application vulnerabilities, and the practical applications of automation.

Certifications

- **Certified Red Team Professional (CRTP) (Jan 2025)**
- **Certified in cybersecurity (cc) ISC2 (June 2023)**
- **Malware Analysis and Triage (Tcm Security)**
